# Mini PowerZone

The powerful portable odour removal system

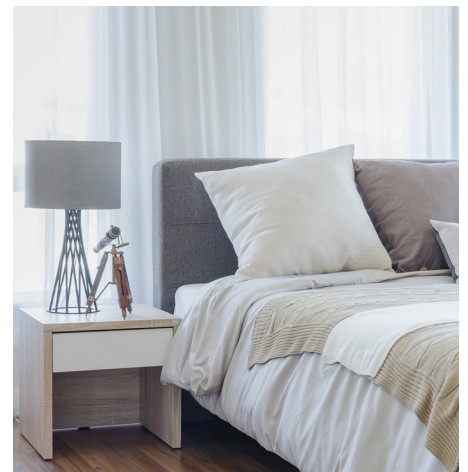

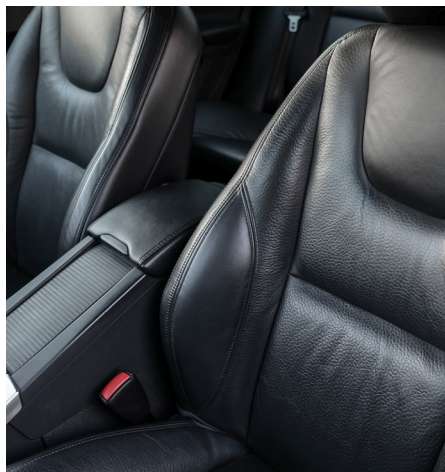

## Mini PowerZone

**You only get one chance to make a good first impression and unwanted odours can quickly destroy that. The Mini PowerZone from PHS offers a powerful and highly effective, environmentally friendly solution that tackles and removes the cause of malodours rather than just masking them.**

Lightweight and portable, it offers the ideal solution for quickly and easily deodorising unoccupied hotel rooms, vehicles, holiday lets and residential home rooms. Simply place the unit in the room with the odour problem, set the timer, vacate the room and close the door and within 60 minutes\* odours are gone and the room is ready for use.

\* Length of time may vary depending on the size of the room and the strength of the odour.

**The Mini PowerZone is used by hotels across the globe including in Disneyland Hotels, Hyatt Regency Hotels, InterContinental Hotels, Novotel Group and Sheraton Hotels.**

Comes with carry strap for ease of transport

# Advanced Technology

The Mini PowerZone uses advanced technology to create a powerful odour removal system. The unit draws in air, and treats it using germicidal UV light and photo-catalytic oxidation that destroys odour-causing micro-organisms, as well as emitting purifying plasma which circulates in the room destroying further bacteria and odours.

- Save time and costs by eliminating odours at source
- Destroys odour causing bacteria, preventing smells returning
- Eliminates all odours including from smoke or chemicals
- Automated and chemical free, it works quickly and effectively and leaves no residue
- Lightweight, portable solution enables it to be used where and when it's needed
- Minimal maintenance – requires only a simple UV lamp replacement after 9,000 hours of use
- Minimal running costs - less than 10p per use\*\*
